

ABSTRACT

The present invention provides for a lottery pooling management system. The lottery pooling management system may include a participant interface. The participant interface may be in communication with a participant computer, the participant interface may be configured to allow pool participants to participate in one or more lottery pools with each lottery pool having one or more sets of lottery numbers. The lottery pooling management system may also include a lottery interface. The lottery interface may be in communication with one or more lotteries and the participant interface, the lottery interface may be configured to ascertain drawing results and jackpot amounts for the one or more lotteries and to compare the drawing results with one or more sets of lottery numbers in the one or more lottery pools. The lottery pooling management system may further include a notification interface. The notification interface may be in communication with the participant interface and the lottery interface, the notification interface may be configured to alert pool participants about activity in the one or more lotteries, the status of the lottery pool, and the compared drawing results.
